

Thinking with Data

How to Turn Information into Insights

Max Shron

Praise for *Thinking with Data*

"*Thinking with Data* gets to the essence of the process, and guides data scientists in answering that most important question—what's the problem we're really trying to solve?"

— Hilary Mason

Data Scientist in Residence at Accel Partners; co-founder of
the DataGotham Conference

"*Thinking with Data* does a wonderful job of reminding data scientists to look past technical issues and to focus on making an impact on the broad business objectives of their employers and clients. It's a useful supplement to a data science curriculum that is largely focused on the technical machinery of statistics and computer science."

— John Myles White

Scientist at Facebook; author of *Machine Learning for
Hackers* and *Bandit Algorithms for Website Optimization*

"This is a great piece of work. It will be required reading for my team."

— Nick Kolegraff

Director of Data Science at Rackspace

"Shron's *Thinking with Data* is a nice mix of academic traditions, from design to philosophy, that rescues data from mathematics and the regime of pure calculation. . . . These are lessons that should be included in any data science course!"

— Mark Hansen

Director of David and Helen Gurley Brown Institute for
Media Innovation; Graduate School of Journalism at Columbia
University
