About the Author

William Shotts has been a software professional for more than 30 years and an avid Linux user for more than 20 years. He has an extensive background in software development, including technical support, quality assurance, and documentation. He is also the creator of *LinuxCommand.org*, a Linux education and advocacy site featuring news, reviews, and extensive support for using the Linux command line.

About the Technical Reviewer

Jordi Gutiérrez Hermoso is a coder, mathematician, and hacker-errant. He runs Debian GNU/Linux exclusively since 2002, both at home and at work. Jordi has been involved with GNU Octave, a free numerical computing environment largely compatible with Matlab, and with Mercurial, a distributed version control system. He enjoys pure and applied mathematics, skating, swimming, and knitting. Nowadays he thinks a lot about environmental mapping, greenhouse gas emissions, and rhino conservation efforts.

BRIEF CONTENTS

Acknowledgments	xxiii
Introduction	xxv

PART I: LEARNING THE SHELL

Chapter 1: What Is the Shell?	3
Chapter 2: Navigation	7
Chapter 3: Exploring the System	13
Chapter 4: Manipulating Files and Directories	23
Chapter 5: Working with Commands	39
Chapter 6: Redirection	49
Chapter 7: Seeing the World as the Shell Sees It	61
Chapter 8: Advanced Keyboard Tricks	73
Chapter 9: Permissions	81
Chapter 10: Processes	99

PART II: CONFIGURATION AND THE ENVIRONMENT

Chapter 11: The Environment	115
Chapter 12: A Gentle Introduction to vi	127
Chapter 13: Customizing the Prompt	145

PART III: COMMON TASKS AND ESSENTIAL TOOLS

Chapter 14: Package Management	155
Chapter 15: Storage Media	165
Chapter 16: Networking	181
Chapter 17: Searching for Files	195
Chapter 18: Archiving and Backup	209

Chapter 19: Regular Expressions	225
Chapter 20: Text Processing	245
Chapter 21: Formatting Output	279
Chapter 22: Printing.	297
Chapter 23: Compiling Programs	309

PART IV: WRITING SHELL SCRIPTS

Chapter 24: Writing Your First Script	323
Chapter 25: Starting a Project	329
Chapter 26: Top-Down Design	339
Chapter 27: Flow Control: Branching with if	349
Chapter 28: Reading Keyboard Input.	363
Chapter 29: Flow Control: Looping with while/until	375
Chapter 30: Troubleshooting.	383
Chapter 31: Flow Control: Branching with case.	395
Chapter 32: Positional Parameters	401
Chapter 33: Flow Control: Looping with for.	413
Chapter 34: Strings and Numbers	419
Chapter 35: Arrays	437
Chapter 36: Exotica	447
Index	459

CONTENTS IN DETAIL

ACKNOWLEDGMENTS xxiii

First Edition	xxiii
Second Edition	xxiv

INTRODUCTION xxv

Why Use the Command Line?	xxvi
What This Book Is About.	xxvi
Who Should Read This Book	xxvii
What's in This Book	xxvii
How to Read This Book.	xxviii
Prerequisites	xxviii
What's New in the Second Edition.	xxix
Your Feedback Is Needed!	xxx

PART I: LEARNING THE SHELL

1 3

WHAT IS THE SHELL? 3

Terminal Emulators	3
Making Your First Keystrokes	4
Command History	4
Cursor Movement	4
Try Some Simple Commands	5
Ending a Terminal Session	6
Summing Up	6

2 7

NAVIGATION 7

Understanding the File System Tree	7
The Current Working Directory	8
Listing the Contents of a Directory	9
Changing the Current Working Directory	9
Absolute Pathnames	9
Relative Pathnames	9
Some Helpful Shortcuts	11
Summing Up	12

3	EXPLORING THE SYSTEM	13
More Fun with ls		13
Options and Arguments		14
A Longer Look at Long Format.		15
Determining a File's Type with file		16
Viewing File Contents with less		17
Taking a Guided Tour.		18
Symbolic Links		21
Hard Links.		22
Summing Up		22
4	MANIPULATING FILES AND DIRECTORIES	23
Wildcards.		24
mkdir—Create Directories		26
cp—Copy Files and Directories		26
Useful Options and Examples		26
mv—Move and Rename Files.		27
Useful Options and Examples		28
rm—Remove Files and Directories		28
Useful Options and Examples		29
ln—Create Links.		30
Hard Links		30
Symbolic Links		31
Building a Playground		31
Creating Directories		31
Copying Files		31
Moving and Renaming Files		32
Creating Hard Links.		33
Creating Symbolic Links		34
Removing Files and Directories		35
Summing Up		37
5	WORKING WITH COMMANDS	39
What Exactly Are Commands?		40
Identifying Commands		40
type—Display a Command's Type		40
which—Display an Executable's Location		40
Getting a Command's Documentation.		41
help—Get Help for Shell Builtins		41
-help—Display Usage Information.		42
man—Display a Program's Manual Page		42
apropos—Display Appropriate Commands		44
whatis—Display One-line Manual Page Descriptions		44
info—Display a Program's Info Entry		45
README and Other Program Documentation Files		46

Creating Our Own Commands with alias	46
Summing Up	48
6	
REDIRECTION	49
Standard Input, Output, and Error	50
Redirecting Standard Output	50
Redirecting Standard Error	52
Redirecting Standard Output and Standard Error to One File	52
Disposing of Unwanted Output	53
Redirecting Standard Input	53
cat: Concatenate Files	53
Pipelines	55
Filters.	55
uniq: Report or Omit Repeated Lines	56
wc: Print Line, Word, and Byte Counts.	57
grep: Print Lines Matching a Pattern	57
head/tail: Print First/Last Part of Files	58
tee: Read from Stdin and Output to Stdout and Files	59
Summing Up	59
7	
SEEING THE WORLD AS THE SHELL SEES IT	61
Expansion	61
Pathname Expansion	62
Tilde Expansion	63
Arithmetic Expansion	64
Brace Expansion	65
Parameter Expansion	66
Command Substitution	67
Quoting	67
Double Quotes	68
Single Quotes.	69
Escaping Characters	70
Backslash Escape Sequences	70
Summing Up	71
8	
ADVANCED KEYBOARD TRICKS	73
Command Line Editing	74
Cursor Movement	74
Modifying Text	74
Cutting and Pasting (Killing and Yanking) Text	75
Completion	76
Using History.	77
Searching History	77
History Expansion	79
Summing Up	80

9	PERMISSIONS	81
Owners, Group Members, and Everybody Else		82
Reading, Writing, and Executing		83
chmod: Change File Mode.		85
Setting File Mode with the GUI		88
umask: Set Default Permissions		89
Some Special Permissions		90
Changing Identities		91
su: Run a Shell with Substitute User and Group IDs		92
sudo: Execute a Command As Another User.		93
chown: Change File Owner and Group.		94
chgrp: Change Group Ownership.		95
Exercising Our Privileges.		95
Changing Your Password		97
Summing Up		98

10	PROCESSES	99
How a Process Works		100
Viewing Processes		100
Viewing Processes Dynamically with top		102
Controlling Processes		104
Interrupting a Process		105
Putting a Process in the Background		105
Returning a Process to the Foreground		106
Stopping (Pausing) a Process		106
Signals		107
Sending Signals to Processes with kill		107
Sending Signals to Multiple Processes with killall.		109
Shutting Down the System		110
More Process-Related Commands.		111
Summing Up		111

PART II: CONFIGURATION AND THE ENVIRONMENT

11	THE ENVIRONMENT	115
What Is Stored in the Environment?		116
Examining the Environment.		116
Some Interesting Variables		117
How Is the Environment Established?		118
What's in a Startup File?		119
Modifying the Environment		121
Which Files Should We Modify?		121
Text Editors		121

Using a Text Editor	122
Activating Our Changes	125
Summing Up	125

12

A GENTLE INTRODUCTION TO VI 127

Why We Should Learn vi	128
A Little Background	128
Starting and Stopping vi	128
Editing Modes	130
Entering Insert Mode	131
Saving Our Work	131
Moving the Cursor Around	131
Basic Editing	132
Appending Text	132
Opening a Line	133
Deleting Text	134
Cutting, Copying, and Pasting Text	135
Joining Lines	136
Search-and-Replace	136
Searching Within a Line	137
Searching the Entire File	137
Global Search-and-Replace	137
Editing Multiple Files	139
Switching Between Files	139
Opening Additional Files for Editing	140
Copying Content from One File into Another	141
Inserting an Entire File into Another	141
Saving Our Work	142
Summing Up	143

13

CUSTOMIZING THE PROMPT 145

Anatomy of a Prompt	145
Trying Some Alternative Prompt Designs	147
Adding Color	148
Moving the Cursor	150
Saving the Prompt	151
Summing Up	151

PART III: COMMON TASKS AND ESSENTIAL TOOLS

14

PACKAGE MANAGEMENT 155

Packaging Systems	156
How a Package System Works	156
Package Files	156
Repositories	157

Dependencies	157
High- and Low-Level Package Tools	158
Common Package Management Tasks	158
Finding a Package in a Repository	158
Installing a Package from a Repository	159
Installing a Package from a Package File	159
Removing a Package	160
Updating Packages from a Repository	160
Upgrading a Package from a Package File	160
Listing Installed Packages	161
Determining Whether a Package Is Installed	161
Displaying Information About an Installed Package	161
Finding Which Package Installed a File	162
Summing Up	162

15

STORAGE MEDIA

165

Mounting and Unmounting Storage Devices	166
Viewing a List of Mounted File Systems	167
Determining Device Names	170
Creating New File Systems	173
Manipulating Partitions with fdisk	173
Creating a New File System with mkfs	175
Testing and Repairing File Systems	176
Moving Data Directly to and from Devices	177
Creating CD-ROM Images	177
Creating an Image Copy of a CD-ROM	177
Creating an Image from a Collection of Files	178
Writing CD-ROM Images	178
Mounting an ISO Image Directly	179
Blanking a Rewritable CD-ROM	179
Writing an Image	179
Summing Up	179
Extra Credit	180

16

NETWORKING

181

Examining and Monitoring a Network	182
ping	182
traceroute	183
ip	184
netstat	184
Transporting Files over a Network	185
ftp	186
lftp—a Better ftp	187
wget	188
Secure Communication with Remote Hosts	188
ssh	188
scp and sftp	192
Summing Up	193

17		
SEARCHING FOR FILES		195
locate—Find Files the Easy Way		196
find—Find Files the Hard Way		197
Tests		198
Operators		200
Predefined Actions		202
User-Defined Actions		204
Improving Efficiency		204
xargs.		205
A Return to the Playground.		206
find Options		208
Summing Up		208
18		
ARCHIVING AND BACKUP		209
Compressing Files		210
gzip		210
bzip2		212
Archiving Files		213
tar.		213
zip		217
Synchronizing Files and Directories		219
Using rsync over a Network		222
Summing Up		223
19		
REGULAR EXPRESSIONS		225
What Are Regular Expressions?		226
grep		226
Metacharacters and Literals.		227
The Any Character		228
anchors		228
Bracket Expressions and Character Classes.		230
Negation		230
Traditional Character Ranges		230
POSIX Character Classes		231
POSIX Basic vs. Extended Regular Expressions.		234
Alternation		235
Quantifiers		236
?—Match an Element Zero or One Time		236
*—Match an Element Zero or More Times		237
+—Match an Element One or More Times		238
{ }—Match an Element a Specific Number of Times.		238
Putting Regular Expressions to Work.		239
Validating a Phone List with grep		239
Finding Ugly Filenames with find.		240
Searching for Files with locate		241
Searching for Text with less and vim		241
Summing Up		242

20

TEXT PROCESSING

245

Applications of Text	246
Documents	246
Web Pages	246
Email	246
Printer Output	246
Program Source Code	247
Revisiting Some Old Friends	247
cat	247
sort	248
uniq	254
Slicing and Dicing	256
cut—Remove Sections from Each Line of Files	256
paste—Merge Lines of Files	258
join—Join Lines of Two Files on a Common Field	260
Comparing Text	262
comm—Compare Two Sorted Files Line by Line	262
diff—Compare Files Line by Line	263
patch—Apply a diff to an Original	265
Editing on the Fly	266
tr—Transliterate or Delete Characters	266
sed—Stream Editor for Filtering and Transforming Text	268
aspell—Interactive Spellchecker	275
Summing Up	278
Extra Credit	278

21

FORMATTING OUTPUT

279

Simple Formatting Tools	280
nl—Number Lines	280
fold—Wrap Each Line to a Specified Length	282
fmt—A Simple Text Formatter	283
pr—Format Text for Printing	286
printf—Format and Print Data	287
Document Formatting Systems	290
groff	290
Summing Up	295

22

PRINTING

297

A Brief History of Printing	298
Printing in the Dim Times	298
Character-Based Printers	298
Graphical Printers	299
Printing with Linux	300
Preparing Files for Printing	300
pr—Convert Text Files for Printing	300

Sending a Print Job to a Printer	301
lpr—Print Files (Berkeley Style)	302
lp—Print Files (System V Style)	302
Another Option: a2ps	303
Monitoring and Controlling Print Jobs	305
lpstat—Display Print System Status.	306
lpq—Display Printer Queue Status.	306
lprm/cancel—Cancel Print Jobs	307
Summing Up	307

23

COMPILING PROGRAMS

309

What Is Compiling?	310
Are All Programs Compiled?	311
Compiling a C Program	311
Obtaining the Source Code	312
Examining the Source Tree	314
Building the Program	315
Installing the Program	318
Summing Up	319

PART IV: WRITING SHELL SCRIPTS

24

WRITING YOUR FIRST SCRIPT

323

What Are Shell Scripts?	323
How to Write a Shell Script.	324
Script File Format	324
Executable Permissions	325
Script File Location	325
Good Locations for Scripts	326
More Formatting Tricks	327
Long Option Names	327
Indentation and Line Continuation	327
Summing Up	328

25

STARTING A PROJECT

329

First Stage: Minimal Document.	330
Second Stage: Adding a Little Data	331
Variables and Constants	332
Assigning Values to Variables and Constants	334
Here Documents.	336
Summing Up	338

26		
TOP-DOWN DESIGN		339
Shell Functions		340
Local Variables		343
Keep Scripts Running		344
Summing Up		347
27		
FLOW CONTROL: BRANCHING WITH IF		349
if Statements		350
Exit Status		350
Using test		352
File Expressions		352
String Expressions		354
Integer Expressions		356
A More Modern Version of test		357
(())—Designed for Integers		358
Combining Expressions.		359
Control Operators: Another Way to Branch		361
Summing Up		362
28		
READING KEYBOARD INPUT		363
read—Read Values from Standard Input		364
Options		366
IFS		368
Validating Input		370
Menus		372
Summing Up		373
Extra Credit.		373
29		
FLOW CONTROL: LOOPING WITH WHILE/UNTIL		375
Looping		376
while		376
Breaking Out of a Loop.		378
until		379
Reading Files with Loops.		380
Summing Up		381
30		
TROUBLESHOOTING		383
Syntactic Errors		383
Missing Quotes.		384
Missing or Unexpected Tokens		385
Unanticipated Expansions		386

Logical Errors	387
Defensive Programming	387
Watch Out for Filenames	388
Verifying Input	389
Testing	390
Test Cases	391
Debugging	391
Finding the Problem Area	391
Tracing	392
Examining Values During Execution	394
Summing Up	394

31

FLOW CONTROL: BRANCHING WITH CASE

395

The case Command	396
Patterns	397
Performing Multiple Actions	399
Summing Up	400

32

POSITIONAL PARAMETERS

401

Accessing the Command Line	401
Determining the Number of Arguments	402
shift—Getting Access to Many Arguments	403
Simple Applications	404
Using Positional Parameters with Shell Functions	405
Handling Positional Parameters en Masse	405
A More Complete Application	407
Summing Up	410

33

FLOW CONTROL: LOOPING WITH FOR

413

for: Traditional Shell Form	413
for: C Language Form	416
Summing Up	417

34

STRINGS AND NUMBERS

419

Parameter Expansion	419
Basic Parameters	420
Expansions to Manage Empty Variables	420
Expansions That Return Variable Names	422
String Operations	422
Case Conversion	425
Arithmetic Evaluation and Expansion	427
Number Bases	427
Unary Operators	428
Simple Arithmetic	428

Assignment.	429
Bit Operations	431
Logic	432
bc—An Arbitrary Precision Calculator Language	434
Using bc	434
An Example Script.	435
Summing Up	436
Extra Credit	436

35

ARRAYS **437**

What Are Arrays?	437
Creating an Array	438
Assigning Values to an Array	438
Accessing Array Elements	439
Array Operations.	441
Outputting the Entire Contents of an Array	441
Determining the Number of Array Elements	441
Finding the Subscripts Used by an Array	442
Adding Elements to the End of an Array.	442
Sorting an Array.	443
Deleting an Array	443
Associative Arrays	444
Summing Up	444

36

EXOTICA **447**

Group Commands and Subshells	447
Process Substitution	451
Traps	453
Asynchronous Execution with wait	456
Named Pipes.	457
Setting Up a Named Pipe	458
Using Named Pipes.	458
Summing Up	458

INDEX **459**
